

Administering The Linux Operating System

“ ”
...

Contents

1 Imap Servers 1

This book is designed to provide “recipes” for administering a Linux operating system. The emphasis shall always be on using the command line (the bash shell) to carry out tasks. This book will treat subjects such as the administration of servers and services, hardware configuration ...

<http://www.shell-fu.org/>

lots of command line recipes

http://dsl.org/cookbook/cookbook_toc.html

A very good Linux User “cookbook” and the primary inspiration for the booklets on this site.

Imap Servers

Section 1

Establish a connection with an imap server via 'telnet'

```
telnet imap.server.name 143
```

Show the capabilities of an imap server tel:>> a capability

Logout of a telnet session on an imap server tel:>> z logout
